Assignment Information

Module Name:	Cyber Security Project
Module Code:	ST6047CEM
Assignment Title:	ST6047CEM Cyber Security Project March Intake 2026 Coursework CW1 (Regular)
Assignment Due:	Jul 29, 2026

Assignment Credit:	5
Word Count:	500
Assignment Type:	Coursework : Individual Report
Grading:	Percentage Grade(Applied Core Assessment).

Assessment Overview

You will be provided with an overall grade between 0% and 100%. You have one opportunity to pass the assignment at or above 40%.

Important Notice

The work you submit for this assignment must be your **own independent work**. More information is available in the 'Assignment Task' section of this assignment brief.

Assessed Module Learning Outcomes

The Learning Outcomes for this module align with the marking criteria which can be found at the end of this brief. Ensure you understand the marking criteria to ensure successful achievement of the assessment task. The following module learning outcomes are assessed in this task

N/A

Assignment Task

Individual Coursework (100)

In this assignment, you will be required to submit a proposal for a cyber security project. Your proposal should include the following sections:

Cover Page with Title: Include the project title, your name, the date, and any other relevant information.

Keywords: List a few relevant keywords that describe the topic of your proposal.

Table of Contents: Provide a list of the different sections in your proposal.

List of Figures: If you include any figures or diagrams in your proposal, list them here.

Introduction

1. Aim: Provide a clear and concise statement of the purpose of your project.

2. Objectives: Outline the specific goals you hope to achieve with your project.
3. Justification: Explain why your project is important and how it will contribute to the field of cyber security.
4. Research Questions: List at least three research questions, one of which must relate to ethical considerations.
5. Scope: Define the boundaries of your project, including any limitations or exclusions.

Literature Review

1. Provide a summary of existing research in the field of cyber security.
2. Include at least five case studies or examples of successful cyber security projects.
3. Identify any gaps or areas for further research.

Proposed Solution

1. Tools: Describe the software, hardware, and other tools you will use to implement your solution.
2. Methodology: Outline the specific steps you will take to implement your solution, including any compliance requirements.
3. Project Management: Explain how you will manage the project, including timelines, milestones, and deliverables.
4. Risk Management: Identify potential risks to the project and describe how you will mitigate them.

Conclusion: Summarize your proposal and reiterate the importance of your project.

References: Provide a list of at least 10 references, including academic journals, books, and other sources.

Appendix: Include any additional information that supports your proposal, such as a SWOT analysis or technical specifications.

Additional Requirements:

1. Identify any ethical considerations related to your project, such as data privacy, security, and confidentiality.
2. Outline any potential legal or regulatory issues that may arise.
3. Provide a clear timeline for the project, including milestones and deadlines.
4. Define the roles and responsibilities of all team members involved in the project.
5. Consider the potential impact of your project on different stakeholders, such as users, customers, and employees.
6. Include a budget and cost estimate for the project.
7. Describe how you will evaluate the success of your project and measure its impact.

Your project proposal will be assessed based on the following criteria:

1. Clarity and completeness of the proposal
2. Relevance and significance of the research question(s) and objectives
3. Quality and depth of the literature review

4. Feasibility and effectiveness of the proposed solution
5. Appropriateness and comprehensiveness of the project management plan
6. Thoroughness and effectiveness of risk management strategies
7. Ethical considerations and potential impact on stakeholders
8. Appropriateness and accuracy of budget and cost estimates
9. Quality and relevance of references
10. Clarity and effectiveness of evaluation and impact measurement strategies

Submission Instructions

Requirement	Details
File Naming	NAME_studentID
File Format	.docx/.pdf format
Submission Method	Campus 4.0 platform (submission link provided 2 weeks before deadline)

Marking and Feedback

How will my assignment be marked?

Your assignment will be marked by the Module Team using standardized criteria.

How will I receive grades and feedback?

Provisional marks will be released once internally moderated. Feedback will be provided alongside grades release within 2 weeks (10 working days).

What will I be marked against?

Details of the marking criteria for this task can be found in the Assessment Marking Criteria section at the end of this brief.

Grade Requirements

You must achieve 40% or above to pass this assessment. Ensure you understand the marking criteria for successful completion.

Assignment Support and Academic Integrity

Getting Help

If you have any questions about this assignment, please meet your respective module leader or teacher for more information.

Language Standards

You are expected to use effective, accurate, and appropriate language within this assessment task.

Academic Integrity

The work you submit must be your own. All sources of information need to be acknowledged and attributed; therefore, you must provide references for all sources of information and acknowledge any tools used in the production of your work, **excluding Artificial Intelligence (AI)**.

We use detection software and make routine checks for evidence of academic misconduct. Definitions of academic misconduct, including plagiarism, self-plagiarism, and collusion can be found in Student handbook in Campus 4.0.

All cases of suspected academic misconduct are referred to for investigation, the outcomes of which can have profound consequences to your studies.

Support for Students with Disabilities

If you have a disability, long-term health condition, specific learning difference, mental health diagnosis or symptoms, contact the Student Support Office for assistance.

Unable to Submit on Time?

If events prevent you from submitting on time, guidance on extenuating circumstances is available in the Student Handbook or from the Student Support Office.

Assessment Marking Criteria

	Research question and primary research method in relation to learning outcomes	Thoroughness of the proposal.
>60%	Research question and primary research method in relation to cybersecurity outcomesA well-considered project proposal that fully satisfies the cybersecurity objectives, with a succinct and focused aim and associated projectA research question or hypothesis that demonstrates a high level of complexity and sophistication in the cybersecurity domain, approaching that of a master's level project.The project involves improving or developing a novel cybersecurity program, tool, application, framework, or methodology, or applying existing ones in a new, unique, and challenging context.The project demonstrates a high degree of innovation and creativity in addressing cybersecurity issues or challenges.	The proposal clearly outlines the research design, data collection, analysis, and evaluation methodsThe research methods are justified and appropriate for addressing the research question in the context of cybersecurity.The proposal justifies the significance and relevance of the project in addressing a critical cybersecurity issue or contributing to cybersecurity knowledge and theory.A detailed plan for conducting and managing the project is included, including timelines, resources, risks, and contingencies.The proposal considers ethical, legal, and social implications, and the project's impact on stakeholders and society.A comprehensive reference list is provided, citing relevant sources from the cybersecurity literature, frameworks, standards, and best practices, as well as empirical evidence, case studies, or real-world examples.
Threshold (40%)	A proposal that identifies an activity with some consideration of a broader cybersecurity context.A research question that is sufficiently scoped and focused but lacks some complexity or sophistication in the cybersecurity domain and may not demonstrate a sufficient level of originality or novelty.A primary method(s) that relates to the production of an appropriate solution to the research question but may lack some justification or validation in the cybersecurity context.	Completion of sections is cursory or minimal with some cohesiveness and contextualization but may lack some detail or clarity in the research process or methodology.Sections demonstrate some understanding of the research process involved, which loosely links with the idea outlined (key question, method, audience), but may not demonstrate a comprehensive and well-justified approach.Research methods are discussed but may lack some consideration as to whether they are the most appropriate and may lack refinement and further detail.Identify some methods of evidence for the project's conduct and management but unclear thinking about planning for reflection or accounting for conduct.
